

DR. BABASAHEB AMBEDKAR MARATHWADA UNIVERSITY**CIRCULAR NO.SU/Engg./B.E.IIrd Yr./64/2018**

It is hereby informed to all concerned that, the syllabi prepared by the Board of Studies & recommended by the Dean, Faculty of Science & Technology the **Academic Council at its meeting held on 30 June & 02 July 2018 has accepted the following syllabi in accordance with Choice Based Credits & Grading System for all Branches Third Year Engineering & Second Year of Bachelor of Architecture** under the Faculty of Science & Technology as enclosed herewith:-

| Sr.No. | Syllabi as per CBC & GS |
|--------|---|
| [1] | Third Year B.E.[Civil Engineering], |
| [2] | Third Year B.E [Mechanical Engineering], |
| [3] | Third Year B.E [EE/EEE/Electrical, Electronics & Power,], |
| [4] | Third Year B.E [Chemical Engineering], |
| [5] | Third Year B.E [Instrumentation Engineering], |
| [6] | Third Year B.E [E&TC/E&C/IE/ECT], |
| [7] | Third Year B.E [CSE/IT]. |
| [8] | Second Year of Bachelor of Architecture. |

This is effective from the Academic Year 2018-2019 and onwards.

All concerned are requested to note the contents of this circular and bring the notice to the students, teachers and staff for their information and necessary action.

University Campus,
Aurangabad-431 004.

REF.NO.SU/2018/

Date:- 03-07-2018. / 10497-03

Title: Electromagnetic Engineering
Class Test (Marks): 20
Theory Examination (Duration): 03 Hrs
Theory Examination (Marks): 80

| | | |
|----------------------|---|---|
| Prerequisites | : | Fundamentals of co-ordinate symmetry, Foundations of Electromagnetics. |
| Objectives | : | <ul style="list-style-type: none"> • To train the students with different laws, equations & electric field intensity related to electromagnetic engineering. • To study energy & potential In an electric field. • To study conductors, dielectric & capacitance of a material. • To study magnetic forces, material & inductance. • To analyze wave propagation in an uniform plane |
| Unit-I | : | Unit-I: Vector Analysis and Coordinate systems: Scalars and Vectors, Vector Algebra, Cartesian, Cylindrical and Spherical Coordinate System, Conversion of vectors between the coordinate systems, Differential length, Area and Volume, Del Operator, Divergence and divergence Theorem, Curl and Stroke Theorem. [06 Hours] |
| Unit-II | : | Unit-2 Electrostatics: Coulombs Law, Electric Field Intensity. Field due to a continuous volume charge distribution Field of a Line Charge, Field of a sheet charge, Electric Flux, Density, Gauss' Law, Applications of Gauss' Law to symmetrical charge distribution and differential volume Element, Maxwell's First law. [06 Hours] |
| Unit-III | : | Unit-3 Energy, Potential, Conductors, Dielectrics: Energy and potential in a moving point charge in an electric field, Potential difference and potential, Potential field of a point charge, Current and Current Density, Continuity of current, Metallic Conductors, Conductor-free space boundary conditions, Dielectric materials, Boundary conditions for perfect dielectric materials. [08 Hours] |
| Unit-IV | : | Unit -4 The Steady Magnetic Field Magnetic Forces, Materials and Inductance: Biot Savart Law Amperes Circuital Law, Magnetic flux and Magnetic flux density. Force on a Moving Charge and Differential Current Element, Force and Torque on a Closed Circuit, Magnetic Boundary Conditions. [06 Hours] |
| Unit-V | : | Unit-5- Maxwell's equations And Uniform Plane Wave: Faraday's Law, Displacement Current, Maxwell's Equations in point form and integral form, Wave Propagation in Free Space, dielectrics, Good conductors, Skin effect, Poynting Vector and power Considerations, Standing wave ratio, Reflection of uniform plane wave in normal incident. [08 Hours] |
| Unit-VI | : | Unit6: Transmission Lines: Introduction, Transmission Line Parameters, Transmission Line Equations, Lossless Line, Distortion less Line, Input Impedance, SWR, Power, The smith Chart. [6 Hours] |

| | | |

Section A: Includes Unit I, II and III; **Section B:** Includes Unit IV, V and VI.

Pattern of Question Paper:

The six/four units in the syllabus shall be divided in two equal parts i.e. 3/2 units respectively. Question paper shall be set having two sections A and B. Section A questions shall be set on first part and Section B questions on second part. Question paper should cover the entire syllabus.

For 80 marks Paper:

1. Minimum ten questions.
2. Five questions in each section.
3. Question no 1 from section A and Question no 6 from section B be made compulsory and should cover complete syllabus of the respective section and should be set for ten marks each. The Question no.1 and 6 should be of objective nature.
4. Two questions of 15 marks each from remaining questions from each section A and B be asked to solve.

Dr. Babasaheb Ambedkar Marathwada University, Aurangabad
(Faculty of Science & Technology)
Syllabus of T.E. (ETC/EC/E&C/IE) Semester-V

Code No.: ETC 302
Teaching Scheme: 04Hrs/week
Theory: 04Hrs/week
Credits:04

Title: Microprocessors and Microcontroller
Class Test (Marks): 20
Theory Examination (Duration): 03 Hrs
Theory Examination (Marks): 80

| | | |
|----------------------|---|---|
| Prerequisites | : | Digital electronics and circuits, Basic electronics and circuits |
| Objectives | : | <ul style="list-style-type: none"> • To understand 8 bit microprocessor 8085 and microcontroller 8051 architecture and programming. • To introduce basic concepts of interfacing memory and peripheral devices to 8 bit microprocessor. • To illustrate interfacing of various peripheral ICs with 8085. • To analyze the basic concepts and programming of 8051 microcontroller. • To understand the interfacing circuits for various applications of 8051 microcontroller. |
| Unit-I | : | Introduction and Architecture of 8085 Microprocessor evolution, Microprocessor 8085-Architecture, Pin configuration, addressing modes. [04 Hours] |
| Unit-II | : | 8085 Instruction Set and Programming Instruction set of 8085, and Assembly language programs, Timing diagram (basic machine cycles), Interrupt structure, Counters & time delays, stack & subroutines and programs. [08 Hours] |
| Unit-III | : | Microprocessor 8085 Memory and IO Interfacing Various Interfacing techniques ,Memory organization & interfacing, Introduction to 8255, Interfacing of LED's, 7 Segment display, ADC / DAC, Stepper motor & keys/keyboard with 8255. Interfacing different peripheral ICs like USART 8251, Programmable Interval Timer 8253, Programmable Interrupt Controller 8259. [08 Hours] |
| Unit-IV | : | Architecture of Microcontroller 8051 Introduction, evolution, comparison between microprocessor and microcontroller, architecture of 8051, key features of 8051, pin details, programming model, memory organization- data and program memory , internal RAM organization-special function registers, control registers, I/O ports, counters and timers, interrupt structures. [06 Hours] |
| Unit-V | : | 8051 Programming Addressing modes, Instruction set of 8051, assembly language programming [07 Hours] |
| Unit-VI | : | 8051 memory and IO interfacing Programming I/O ports, Interrupts, timer/ Counter, serial communication, external memory interfacing. Interfacing of LED, LCD ADC, DAC, Stepper Motor, keyboard. [07 Hours] |

Title: Digital Communication

Class Test (Marks): 20

Theory Examination (Duration): 03 Hrs

Theory Examination (Marks): 80

| | | |
|-------------------------|---|---|
| Prerequisites | : | Fourier series, Fourier transform, probability theory, Analog communication. |
| Objectives | : | To study- <ul style="list-style-type: none"> • Fundamentals of digital communication • Pulse modulation and digital modulation techniques • Spread Spectrum Techniques. • Probability theory and random process |
| Unit-I | : | Digital Baseband Modulation Techniques and Waveform Coding Techniques: Base Band System, Formatting Textual Data, Messages, Characters & Symbols, Formatting Analog Information, PCM, Bandwidth, SNR of PCM, DPCM, DM, ADM. [08 Hours] |
| Unit-II | : | Probability Theory: Conditional Probability, Statistical Independence, Baye's Theorem, Binomial, Poisson Normal Distribution, Information transmission on continuous and discrete channel. [06 Hours] |
| Unit-III | : | Random Process: Introduction to Random variable, Functions of Random Variable, Random Processes, Statistics of Random Process. Transmission of a Random Process Through a LTI Filter Power Spectral Density. [06 Hours] |
| Unit-IV | : | Baseband Transmission: Narrow Band Noise, Representation of Narrowband Noise in terms of Phase & Quadrature Components, Concept of line Codes, Representation of Signals through line codes, Response of Linear System to Random Processes, Matched Filter. [06 Hours] |
| Unit-V | : | Carrier Modulation Techniques: Introduction to Carrier Modulation, FSK, PSK, BPSK, DPSK, QPSK, Coherent Detection and Non Coherent Detection, Error Performance for Binary Systems [08 Hours] |
| Unit-VI | : | Spread Spectrum Techniques: Pseudo-random Sequence, Direct Sequence Spread Spectrum, Block Details & mathematical treatment, Jamming margin and processing gain, Frequency Hop Spread Spectrum, Applications of DSSS and FHSS. [06Hours] |
| Reference Books: | : | 1. Bernard Sklar, "Digital Communications fundamentals and Applications" Pearson Education, Second Edition. 2. Title: Digital Signal Processing
Class Test (Marks): 20
Theory Examination (Duration): 03 Hrs
Theory Examination (Marks): 80

| | | |
|----------------------|---|--|
| Prerequisites | : | Knowledge of Signals and Systems |
| Objectives | : | <ul style="list-style-type: none"> • To understand DSP & ASP Systems • To understand ZT, DTFT and DFT. • To understand, analyze and design FIR and IIR filters and its realization. • To understand its hardware implementation using DSP Processor. |
| Unit-I | : | <p>Introduction to DSP Systems: Basic Elements of DSP systems, Advantages of DSP over ASP, Introduction to FIR & IIR Systems</p> <p>Realization of FIR and Systems: Introduction, Basic realization blocks diagram. FIR realization- Direct Form (Non-linear phase and Linear phase), Cascade and Parallel realization. IIR realization- Direct form I and II, Cascade and parallel realization. (6 Hrs)</p> |
| Unit-II | : | <p>The Z- Transform: The direct Z -transform , the inverse Z -Transform, properties of the Z-transform, Rational Z -transforms , inversion of the Z- transform , stability in Z –domain , the one sided Z- transform. Relation between Laplace Transform and Z –transform, Relation between Fourier transform and Z-transform. (8 Hrs)</p> |
| Unit-III | : | <p>Discrete Fourier Transforms (DFT) and Fast Fourier Transform (FFT): Frequency domain sampling, the Discrete Fourier Transforms (DFT), DFT as a linear transformation, properties of the DFT , circular convolution, linear convolution vs. circular convolution. FFT Algorithms: Decimation-in –time (DIT) algorithm , Decimation –in-frequency (DIF) algorithm , computation of inverse DFT using FFT, fast convolution techniques: Overlap- add method, overlap-save method . (8 Hrs)</p> |
| Unit-IV | : | <p>FIR Filter Design Characteristics of FIR Filters. Properties of FIR Filters. FIR Design using Windowing Technique [Rectangular Window, Hamming Window and Hamming Window] , FIR Design using Kaiser Window, FIR Design using Frequency Sampling Technique (6 Hrs)</p> |
| Unit-V | : | <p>IIR Filter Design. Introduction to IIR Filters, IIR Filter Designing by using Approximation of Derivatives, Impulse Invariant method and Bilinear Z Transformation method, Matched Z Transform Method, Design of Low pass digital Butterworth filter, Frequency Transformation, Comparison of FIR & IIR Filters (6 Hrs)</p> |

| | | |
|-------------------------|---|---|
| Unit-VI | : | Finite word length effects in Digital Filters Binary fixed point and floating point number representations, Comparison - Quantization noise – truncation and rounding – quantization noise power-input quantization error- coefficient quantization error – limit cycle oscillations-dead band- Overflow error-signal scaling. DSP Processors. Introduction, Architecture of DSP Processor, TMS320C67XX, Specifications, Comparison between general purpose and DSP Processor (6 Hrs) |

(Faculty of Science & Technology)
Syllabus of T.E. (ETC/EC/E&C/IE) Semester-V

Code No.: ETC343

Title: Computer Architecture and Operating System

Teaching Scheme: 04Hrs/week

Class Test (Marks): 20

Theory: 04Hrs/week

Theory Examination (Duration): 03 Hrs

Credits: 04

Theory Examination (Marks): 80

| | | |
|----------------------|---|--|
| Prerequisites | : | — |
| Objectives | : | <ul style="list-style-type: none"> • To state advantages and necessity of parallel processing • To discuss principles of pipelining architecture • To share fundamentals of Operating System • To elaborate concepts of multitasking, multiprogramming, timesharing, buffering & spooling |
| Unit-I | : | <p>Overview of Parallel Processing and Pipelining Processing Necessity of high performance, Constraints of conventional architecture, Parallelism in uniprocessor system, Evolution of parallel processors, Future trends, Architectural classification, Applications of parallel processing, Instruction level Parallelism and Thread Level Parallelism, Principles of scalable performance: Performance metrics and measures, Speedup performance laws. [06 Hours]</p> |
| Unit-II | : | <p>Pipeline Architecture Principles and implementation of pipelining, Classification of pipelining processors, General pipelining reservation table, Design aspect of arithmetic and instruction pipelining, Pipelining hazards and resolving techniques, Data buffering techniques, Job sequencing and collision, Advanced pipelining techniques, Loop unrolling techniques, Out of order execution, Predicated execution, Speculative loading, Register Stack Engine, Software pipelining [08 Hours]</p> |
| Unit-III | : | <p>Computer Architecture Explicitly Parallel Instruction Computing (EPIC) Architecture, Case study of Intel Itanium Processor, VLIW (Very Long Instruction Word) processor, Superscalar Architecture: Pentium, Ultra SPARC, Dual core [06 Hours]</p> |
| Unit-IV | : | <p>System Software Overview of all system software, Operating system, I/O manager, Assembler, Compiler, linker, Loader, OS services and Components, Multitasking, Multiprogramming, Timesharing, Buffering, Spooling [06 Hours]</p> |
| Unit-V | : | <p>Process and Thread Management Concept of process and threads, Process states, Context switching, inter process communication, mutual exclusion, semaphores, wait and signal procedures, process scheduling and algorithms, critical sections, Multithreading [08 Hours]</p> |
| Unit-VI | : | <p>Memory Management Memory partitioning, Swapping, Paging, Virtual Memory, Page replacement algorithms, Segmentation [06 Hours]</p> |

Section A: Includes Unit I, II and III; **Section B:** Includes Unit IV, V and VI.

Pattern of Question Paper:

The six/four units in the syllabus shall be divided in two equal parts i.e. 3/2 units respectively. Question paper shall be set having two sections A and B. Section A questions shall be set on first part and Section B questions on second part. Question paper should cover the entire syllabus.

For 80 marks Paper:

1. Minimum ten questions.
2. Five questions in each section.
3. Question no 1 from section A and Question no 6 from section B be made compulsory and should cover complete syllabus of the respective section and should be set for ten marks each. The Question no.1 and 6 should be of objective nature.
4. Two questions of 15 marks each from remaining questions from each section A and B be asked to solve.

Title: Embedded System

Class Test (Marks): 20

Theory Examination (Duration): 03 Hrs

Theory Examination (Marks): 80

| | | |
|----------------------|---|--|
| Prerequisites | : | Digital electronics, Microprocessor based systems. |
| Objectives | : | To understand the applications of Microcontrollers. To understand need of microcontrollers in embedded system. To understand architecture and features of typical Microcontroller. To learn interfacing of real world input and output devices. To study various hardware & software tools for developing applications. |
| Unit-I | : | PIC18F4550 Microcontroller Architecture: PIC family PIC 10, PIC12, PIC16, PIC18, PIC18F4550: Features, architecture, registers, memory organization and types, stack, Pin description, oscillator options, BOD, power down modes and configuration bit settings, Port structure with programming, watchdog timer, timer and its programming. All programs in embedded C. [8 Hours] |
| Unit-II | : | Programming Concepts and Embedded Programming in C: Comparison of Software Programming in Assembly language and in high level language 'C', C program elements: Header and source files and processor directives, data types, data structures, modifiers, statements, loops, pointers, object oriented programming. [6 Hours] |
| Unit-III | : | PIC18F4550 Interfacing: Interrupt Structure (Legacy and priority mode) of PIC18F with SFRS. Use of timers with interrupts, CCP modes: Capture, Compare and PWM generation, Sensor interfacing using ADC, LCD (4&8 bits), DC Motor speed control with CCP, MSSP structure (SPI & I2C), Enhanced USART(LIN), RTC(DS1306) with I2C and EEPROM with SPI, CAN : All programs in embedded C. [6 Hours] |
| Unit-IV | : | Arduino Uno R3: Introduction, The Arduino Platform, Block diagram, Atmel ATmega328/AVR family, Architecture, Pin functions, overview of main features such as I/O Ports, Timers, interrupts, serial port, PWM, ADC. [6 Hours] |
| Unit-V | : | Arduino Basic programming: Arduino Control structure, Functions, operators, Sketch Structure, Variables, Data types, Constants, flow control, Analog and digital I/O, time, math, random, serial. Programming- I/O Ports, Timers, interrupts, serial port, PWM, ADC, 7 Segment display. [8 Hours] |

| | | |
|-------------------------|---|--|
| Unit-VI | : | Interfacing with Arduino: LCD, DAC, PWM motor speed controller, IR Sensor, Ultrasonic Sensor (HC-SR04), Temperature and Humidity Sensor (DHT11), SPI, wifi ESP8266, Bluetooth HC-05. [6 Hours] |
| Reference Books: | : | Reference Books: 1. Mazidi, “PIC microcontroller & embedded system”, 3rd Edition ,Pearson 2. Peatman John B., “Design with PIC Microcontrollers”, Pearson Edition. 3. Title: Feedback Control System

Class Test (Marks): 20

Theory Examination (Duration): 03 Hrs

Theory Examination (Marks): 80

| | | |
|----------------------|---|---|
| Prerequisites | : | Laplace Transform , Matrix Operation , Algebra |
| Objectives | : | <ul style="list-style-type: none"> • To understand the user specification and analyze the system in time and frequency domain • To find gain of various systems • To analyze performance of the system. • To introduce concepts of PID controllers and digital and control systems • To introduce the state variable analysis method |
| Unit-I | : | Introduction of Control System: Definition of control system, Various Control Systems, Difference Between Closed Loop and Open Loop Control Systems, Examples on Control System, Feedback and Feed forward Control System, Mathematical modeling of a Physical system, Differential equations of Physical system (06 Hours) |
| Unit-II | : | Mathematical Modelling: Basic Definitions, advantages and disadvantages of block diagram, block diagram reduction rules, important definitions related to SFG, comparison of block diagram and SFG methods, Mason's gain Formula for SFG, Formation of SFG from equations and electrical networks. Transfer Function, its properties, advantages and disadvantages, poles and zeros of Transfer Function, Mechanical system modeling, Analogous systems (08 Hours) |
| Unit-III | : | Time Response Analysis: Transient and steady state response, stability and sensitivity, steady state error, First and Second order system analysis, Damping Ratio, Routh's Stability Criterion, Advantages and disadvantages, Hurwitz's criterion, Root Locus & Rules of Root Locus Plot (06 Hours) |
| Unit-IV | : | Frequency Domain Analysis: Frequency domain specification, Polar plots, Bode plots, Phase and Gain margin, Stability analysis using Bode Plot, Nyquist Stability criterion. (08 Hours) |
| Unit-V | : | Control Actions and Control System Components: Proportional, integral, PD, PI and PID controllers, servo potentiometers, servo motors, techo generator, stepper motor and synchros. (06 Hours) |
| Unit-VI | : | State Space Representation: State variables, state model, state diagram representation Study of programmable logic controllers, Concept of fuzzy logic, Neural based control system, sensors, electronic controllers, relays. (06 Hours) |
| Books: | : | <ol style="list-style-type: none"> 1. N. J. Nagrath and M. Gopal, " Control System Engineering ", New Age International Publishers, 5th Edition 2. Benjamin C. Kuo , "Automatic control systems", Prentice Hall of India, 7th Edition 1995 |

- 1 Minimum ten questions.
- 2 Five questions in each section.
- 3 Question no 1 from section A and Question no 6 from section B be made compulsory and should cover complete syllabus of the respective section and should be set for ten marks each. The Question no.1 and 6 should be of objective nature.
- 4 Two questions of 15 marks each from remaining questions from each section A and B be asked to solve.

Dr.Babasaheb Ambedkar Marathwada University, Aurangabad
(Faculty of Science & Technology)
Syllabus of T.E. (ETC/EC/E&C/IE) Semester-VI

Code No.: ETC354

Teaching Scheme: 04Hrs/week

Theory: 04Hrs/week

Credits:04

Title: Electronic Circuit Technology

Class Test (Marks): 20

Theory Examination (Duration): 03 Hrs

Theory Examination (Marks): 80

| | | |
|----------------------|---|--|
| Prerequisites | : | Knowledge of Electronic Devices & Circuits, Digital Electronics, and Instrumentation. |
| Objectives | : | <ol style="list-style-type: none"> 1. To study different circuit design. 2. To study different aspect of Op-Amp. 3. To study different aspect of physical & analog quantities. 4. To study electronics & digital system design. |
| Unit-I | : | <p>Design of Power Supply Active and Passive Components: Study of data sheets, characteristics, specifications and selection criteria of various active and passive components. Power Supply Design: Selection of transformers, Design of Power supply and Dual power supply with protection circuits, Design of filter circuit, Design using linear(LM78XX, LM 79XX, LM317 & LM 337) and switching regulators(78S40), Switching Mode Power Supply and its comparison with Linear Power Supply. (8Hrs)</p> |
| Unit-II | : | <p>Design of Analog Hardware Design using Opamp: Types, specifications, characteristics, selection criteria, Inverting and Non-inverting Amplifier, Voltage to current Amplifier, Current to voltage Amplifier, Instrumentation Amplifier (Three OPAMP configuration), Design of Filters using opamp, Design of power amplifier and special purpose amplifier, Design of oscillators. (8Hrs)</p> |
| Unit-III | : | <p>Measurement and Signal Coding: Measurement of Temperature by thermistor and IC Temperature sensor, Measurement of light level by photo diodes and photo transistors, Measurement of strain by strain gauge. (4Hrs)</p> |
| Unit-IV | : | <p>Design Using Specialized IC: IC 555 (Astable and monostable multivibrator), LM 380/ LM 386 (Audio Amplifier), IC7106/7107 (DC voltmeter), ICL 8038 (Function Generator), LM 565 (PLL) (6Hrs)</p> |
| Unit-V | : | <p>Design of Digital System: Need of Data Acquisition System, Application Areas of DAQs, performance parameters of DAQs, Selection criteria for ADC and DAC. Introduction to Finite State Machines, State Diagrams, Design of Mealy FSM Design of Moore FSM, Interfacing of Single Digit, Multiplexed Seven Segment Display, Opto coupler and relay. (6Hrs)</p> |
| Unit-VI | : | <p>Electronics System Design Considerations: Reliability Engineering, Exponential Law of Reliability, Quality, Failure or Defects, Maintainability, MTTR, MTTBF, MTTF. Noise in electronics circuits, grounding, Shielding, Guarding, Enclosure sizing Selection of materials for enclosure, Heat transfer fundamentals, thermal calculations, thermal time constants, Heat Sinks,</p> |

| | | |
|-------------------------|---|---|
| | | PCB Design: Rules, Power and ground traces routing, PCB design rules for digital circuits, Noise due to ground and supply line, grounds, returns, shields, PCB design rules for analog circuits (8Hrs) |
| Reference Books: | : | <ol style="list-style-type: none"> 1. Ron Lenk, "Practical Design of Power Supplies", John Wiley and Sons 2. Section A: Includes Unit I, II and III; **Section B:** Includes Unit IV, V and VI.

Pattern of Question Paper:

The six/four units in the syllabus shall be divided in two equal parts i.e. 3/2 units respectively. Question paper shall be set having two sections A and B. Section A questions shall be set on first part and Section B questions on second part. Question paper should cover the entire syllabus.

For 80 marks Paper:

1. Minimum ten questions.
2. Five questions in each section.
3. Question no 1 from section A and Question no 6 from section B be made compulsory and should cover complete syllabus of the respective section and should be set for ten marks each. The Question no.1 and 6 should be of objective nature.
4. Two questions of 15 marks each from remaining questions from each section A and B be asked to solve.

Teaching Scheme: 04Hrs/week

Theory: 04Hrs/week

Credits:04

Title: ROBOTICS

Class Test (Marks): 20

Theory Examination (Duration): 03Hrs

Theory Examination (Marks): 80

| | | |
|-------------------------|---|---|
| Prerequisites | : | - |
| Objectives | : | <ol style="list-style-type: none">1. To study Basic concept of robotics.2. Building blocks of robotics for transformation.3. To study motion of robotic manipulator4. T study different type of sensors, actuator and gripper require for robotics5. To study motion planning and controlling of robot |
| Unit-I | : | Introduction: Definition, law of robotics, Seven criteria defining the robot, Industrial robot Classification by mechanical structure, components in robotic system- manipulator, controller, Power conversion unit etc., Robot category. [06 Hours] |
| Unit-II | : | Dynamics: Dynamic constraints, velocity and acceleration of moving frame, Robotic mass distribution and inertia, Tension, Newton's equation, Euler equation, dynamic modeling of robotic manipulators [06 Hours] |
| Unit-III | : | Kinematics: Homogenous co-ordinate vector operation, matrix operation, coordinate reference frame, , Robot arm introduction, kinematic chain and forward kinematics, Forward kinematic: URDF notation and D-H matrix, DH notation example : 2 link planer robot and SCARA robot, Inverse or back solutions- problem of obtaining inverse solution, techniques of using direct & geometric approach. [08 Hours] |
| Unit-IV | : | Sensor, Actuators and End Effectors: Internal & External sensors, position, relocking and acceleration sensors, proximity sensors, force sensors, touch slip laser range tinder, camera, type of actuators: Pneumatic, hydraulic and electric, DC and servo motor, Different types of grippers, vacuum & other methods of gripping. [06 Hours] |
| Unit-V | : | Motion Planning and Controllers: On-off trajectory, relocking and acceleration profile, Cartesian motion of manipulator, joint interpolated control, Jacobian in terms of D-H matrix, Obstacle avoidance, Basic control system, control loops of robotic system. [06 Hours] |
| Unit-VI | : | Vision System: Machine Vision system, description, sensing, Digitizing, Image Processing and Analysis and Application of Machine Vision System. Robotic assembly sensors & Intelligent Sensors, Object recognition. [08 Hours] |
| Reference Books: | : | <ol style="list-style-type: none">1. Fundamentals of Robotics: Analysis and Control- Robert J Schilling, PHI, NewDelhi2. Title: ELE-II (Advanced Industrial Automation)

Teaching Scheme: 04Hrs/week

Class Test (Marks): 20

Theory: 04Hrs/week

Theory Examination (Duration): 03 Hrs

Credits:04

Theory Examination (Marks): 80

| | | |
|----------------------|---|--|
| Prerequisites | : | Relay logic, Basics of transducers, actuators |
| Objectives | : | The trend in the Industry for automation is changing one and student will able to develop the skill set for latest development of automation. |
| Unit-I | : | <p>Basic of Automation: Introduction of sensors, actuators, control loop, concept of process variables, set point, controlled variable, manipulated variable, load variable. Representation of process loop components using standard symbols (basic with reference to control loop), and Examples of process loops like temperature, flow, level, pressure etc. Hierarchical levels of automation, introduction to plant automation. [08 Hours]</p> |
| Unit-II | : | <p>Programmable Logic Controller (PLC): Continuous versus Discrete Process Control, ladder diagram using standard symbols, Architecture of PLC, Types of Input & Output modules (AI, DI, AO, DO), Types of Timer, Counters, Interfacing pneumatic & Hydraulic systems, Fixed & Modular PLC (Rack, Slot, Grouping), Specifications, manufacturers, PLC ladder diagram and instructions, PLC Programming for process applications. Supervisory control system and data acquisition (SCADA): Introduction to SCADA, SCADA architecture, creation of data base, interfacing with PLC. [08 Hours]</p> |
| Unit-III | : | <p>Pneumatics and Hydraulics Introduction, Basic principles, Function and application of pneumatic components, Designation and drawing of pneumatic symbols, Drawing pneumatic circuit diagrams in accordance with standards. Direct and indirect stroke-dependent control systems Shutoff valves, Logical Elements, Time-dependent control systems with time delay valve, Pressure-dependent control systems with pressure sequence valves. Hydraulic system structure, Hydraulic Pumps, Pressure control valves Electro pneumatics and Hydraulics: Function & use of electrical & electro pneumatic & electro hydraulic components such as switches, pushbuttons & solenoid valves, pneumatic & hydraulic symbols, Development of circuit diagrams, Direct & indirect activation of cylinder, Logics, Position control circuits, Exercises. [08 Hours]</p> |
| Unit-IV | : | <p>Actuators: Types of Control Valve, Control valve terminology Range ability, turndown, valve capacity, Air to open, Air to close, valve gain etc. Control valve characteristics: Inherent & installed Control valve accessories. Positioners: Application/Need, Types, Effect on performance of control valves. Reversing</p> |

| | | |
|-------------------------|---|---|
| | | relay, Solenoid valves, Air lock, position indicating switches, Electro pneumatic converter, hand wheel. Brief of stepper motor, servo-motor, Motor control circuits, AC Drives, DC Drives, VF Drives, PWM Techniques. [06 Hours] |
| Unit-V | : | Industry Standard Protocols: HART Protocol introduction, frame structure, programming, implementation examples, Benefits, Advantages and Limitations. Introduction to Foundation Fieldbus H which includes structure, programming, FDS configuration, implementation examples, benefits, advantages and limitations. Comparison with other fieldbus standards like Devicenet, Profibus, Profinet, Controlnet, CAN, Industrial Ethernet etc. [06 Hours] |
| Unit-VI | : | Project Management Design concept, kickoff meeting, Design :BOM ,control panel, power flow diagram Dough Maker, yogurt mixer, carton sorting, safety in automation. [04 Hours] |
| Reference Books: | : | References Books / Handbooks <ul style="list-style-type: none"> • Programmable Logic Controller, 5th Edition, by W. Bolton, ELSEVIER • Programmable Logic Controller Principles and Applications by Webb and Reis, PHI Publications • Computer based Process Control by Krishna Kant , PHI Publications • Introduction to Programmable Logic Controller by Garry Dunning, Thomson Learning Publications. • Computer based Process Control by Krishna Kant, PHI Publications. • Oil hydraulic systems by S.R.Mujumdar, Tata McGraw Hill publications. • Pneumatic systems by S.R.Mujumdar, TataMcGraw hill publications. • Siemens PLC Programming Handbook. |

Title: ELE-II (Speech Processing)
Class Test (Marks): 20
Theory Examination (Duration): 03 Hrs
Theory Examination (Marks): 80

| | | |
|----------------------|---|--|
| Prerequisites | : | - |
| Objectives | : | <ol style="list-style-type: none"> 1. To introduce the models of speech production and acoustic phonetics 2. To teach time and frequency domain techniques for estimating speech parameters 3. To teach predictive techniques for speech coding 4. To introduce speech recognition and speech synthesis applications |
| Unit-I | : | Speech Production, Acoustic Phonetics and Auditory Perception Anatomy and physiology of speech organs, articulatory phonetics, acoustic phonetics, acoustic theory of speech production, discrete time model for speech production. Ear physiology and psychoacoustics [06 Hours] |
| Unit-II | : | Speech Analysis in Time Domain Time energy, average magnitude, and zero-crossing rate, speech vs silence discrimination Short-time autocorrelation, pitch period estimation using short-time autocorrelation, median smoothing [06 Hours] |
| Unit-III | : | Speech Analysis in Frequency Domain: Time dependent Fourier representation for voiced and unvoiced speech signals, linear filtering interpretation, spectrographic displays. Pitch period estimation based on FFT and harmonic peak detection method, estimation of formants using log spectrum [08 Hours] |
| Unit-IV | : | Homomorphic Speech Processing: Cepstral analysis of speech, mel frequency cepstral coefficients (MFCC), perceptual linear prediction (PLP). Pitch period estimation in cepstral domain, evaluation of formants using cepstrum [08 Hours] |
| Unit-V | : | LPC and Parametric Speech Coding: Review of lattice structure realization, forward and backward error filters, normal equations & its solutions, Levinson-Durbin algorithm, covariance method, Berg's algorithm. Channel Vocoders, linear prediction (LP) based vocoders, residual excited LP (REL) based Vocoders, voice Excited LP (VEL) based vocoders, multi-pulse LP (MPL) based vocoders, code excited LP (CEL) based vocoders [06 Hours] |
| Unit-VI | : | Speech Processing Applications: Speech recognition systems, deterministic sequence recognition for ASR, statistical sequence recognition for ASR (Hidden Markov Model (HMM)). Text to speech system (TTS), concatenative synthesis, synthesis using formants, LPC synthesizer [06 Hours] |

Course Code: ETC375

Course: Mini Project

Practical: 02 Hrs/week

Term Work: 50 Marks

Credits: 02

| | | |
|--------------------------|---|--|
| Course Objectives | : | <ul style="list-style-type: none">• To plan for various activities of the project and distribute the work amongst team members.• To develop the ability to define and design the problem and lead to its accomplishment with proper planning.• To understand the importance of document design by compiling Technical Report on the Minor Project work carried out.• To develop student's abilities to transmit technical information clearly and test the same by delivery of Seminar based on the Minor Project. |
| Guidelines: | : | <ol style="list-style-type: none">1. Students should select a problem which addresses some basic home, office or other real life applications.2. Projects which will address the social issues will be given due weightage.3. It is desirable that the systems developed by the students have some novel features.4. The batch size shall not exceed TWO students per batch.5. The students have to select a suitable problem, design, prepare the drawings, produce the components, assemble and commission the project.6. Institute may arrange demonstration with poster presentation of all mini projects developed by the students at the end of semester.7. At the end of the semester, the students have to prepare and present 20-25 pages project report.8. Final evaluation shall be based on continuous internal assessment followed by Viva-Voce. |
